

General Specifications

UT35A/UT32A Digital Indicating Controllers

GS 05P01D31-01EN

[Style: S9]

■ Overview

The UT35A/UT32A digital indicating controllers employ an easy-to-read, 14-segment large color LCD display, along with navigation keys, thus greatly increasing the monitoring and operating capabilities. A ladder sequence function is included as standard. The short depth of the controller helps save instrument panel space. The UT35A/UT32A also support open networks such as Ethernet communication.

■ Features

- A 14-segment, active (PV display color changing function) color LCD display is employed. Two five-digit, high-resolution displays are possible. Alphabet letters can be displayed in an easy-to-read manner. The guide display shows parameter names.
- Easy to operate
Navigation keys (SET/ENTER and Up/Down/Left/Right arrow keys) are employed to facilitate making settings.
- 65 mm depth
The small depth enables the mounting in a thin and small instrumented panel.
- Ladder sequence function is included as standard. This function allows for creating a simple sequence control. Dedicated LL50A Parameter Setting Software (sold separately) allows for performing programming using a ladder language.
- Various built-in open network functions such as Ethernet are available.
Easy connection with various vendors' PLCs is possible.
- Quick setting function
Setting only the minimum necessary parameters for operation is possible.
- Equipped with a multitude of functions
Universal I/O are included as standard. PID control, heating/cooling control, etc. are available.

Transportation and Storage Conditions

- Temperature: -25 to 70°C
- Temperature change rate: 20°C per hour or less
- Humidity: 5 to 95%RH (no condensation)

Effects of Operating Conditions

- Effect of ambient temperature

For voltage or TC input:

$\pm 1 \mu\text{V}/^\circ\text{C}$ or $\pm 0.01\%$ of F.S. (instrument range)/ $^\circ\text{C}$, whichever is greater

For RTD input:

$\pm 0.05^\circ\text{C}/^\circ\text{C}$ (ambient temperature) or less

For current input:

$\pm 0.01\%$ of F.S. (instrument range)/ $^\circ\text{C}$

For analog output:

$\pm 0.02\%$ of F.S./ $^\circ\text{C}$ or less

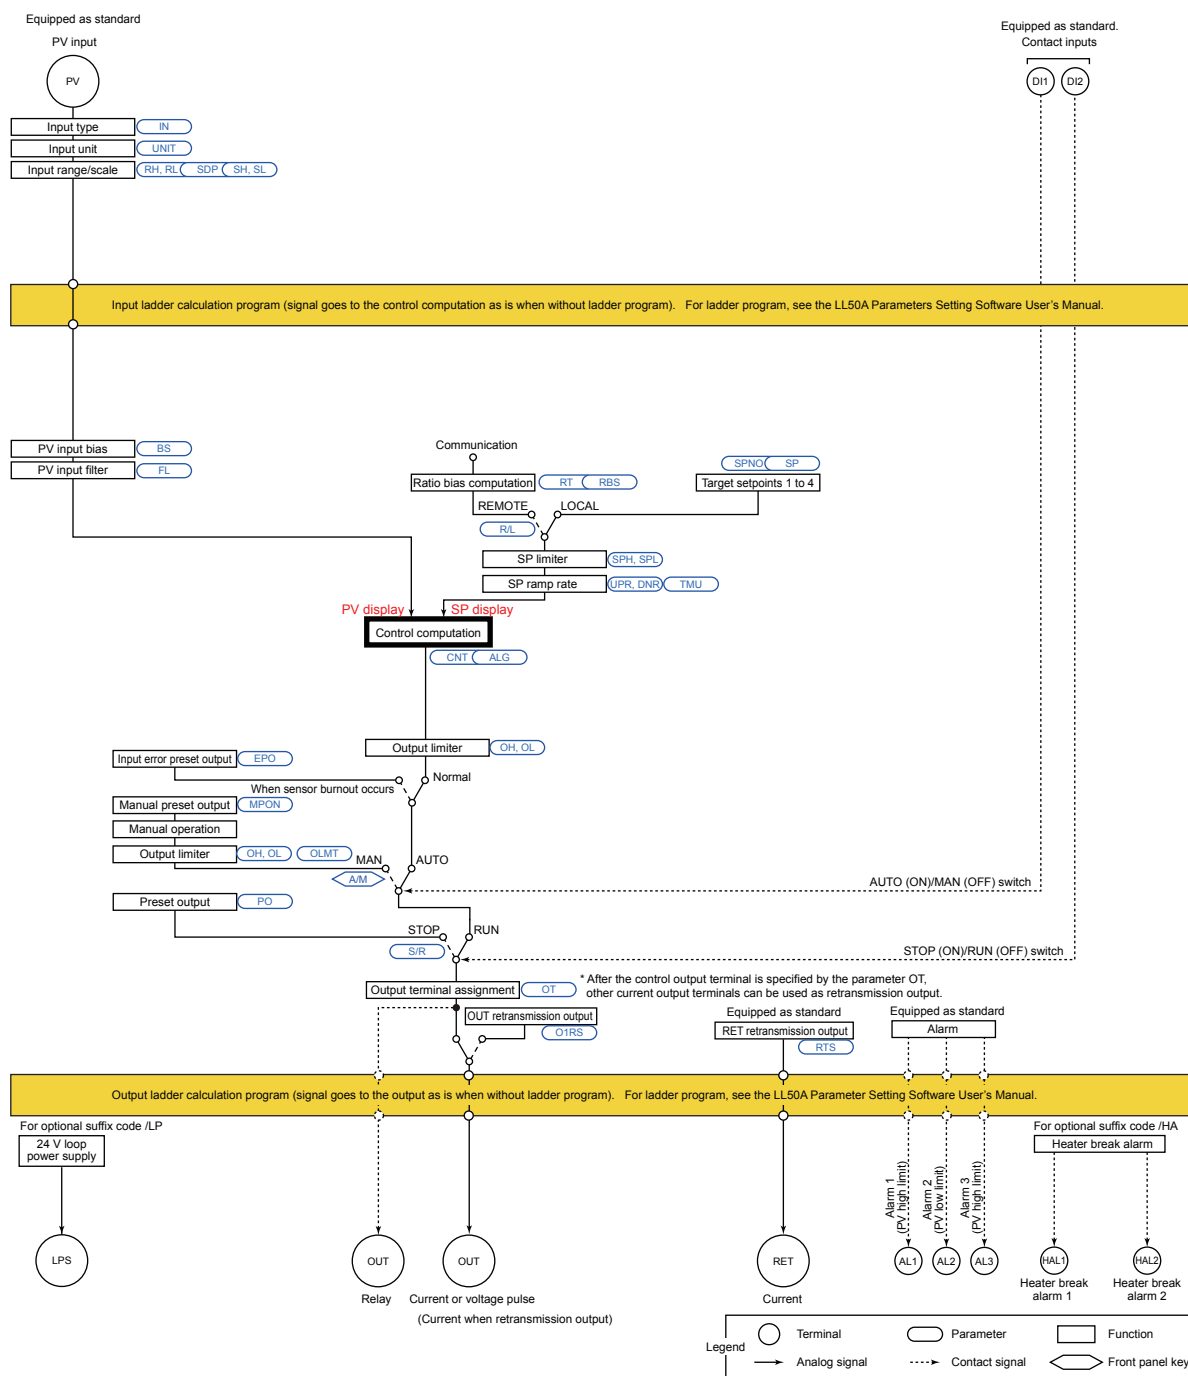

- Effect of power supply fluctuation:

For analog input: $\pm 0.05\%$ of F.S. (instrument range) or less

For analog output: $\pm 0.05\%$ of F.S. or less
(Each within rated voltage range)

RS-485 communication RS485

Ethernet communication (with gateway function)

PROFIBUS-DP communication (with Modbus master)

If the UT is located at the end of a segment for the PROFIBUS communication wiring, terminating resistors are separately needed. These are to be prepared by users. (390 Ω: 2 pcs. 220 Ω: 1 pc., or an active terminator.)

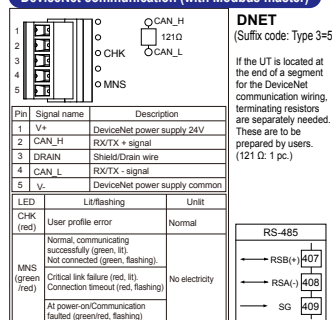

CC-Link communication (with Modbus master)

If the UT is located at the end of a segment for the CC-Link communication wiring, terminating resistors are separately needed. These are to be prepared by users. (110 Ω: 1 pc.)

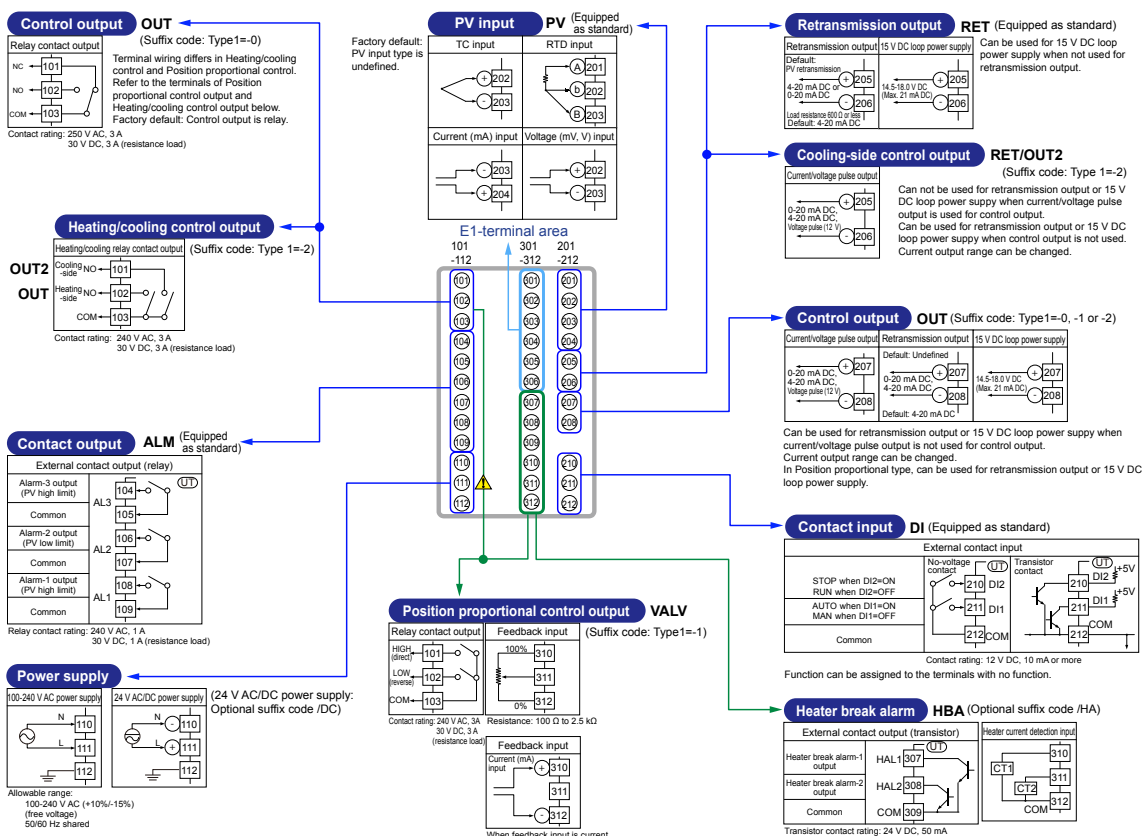

DeviceNet communication (with Modbus master)

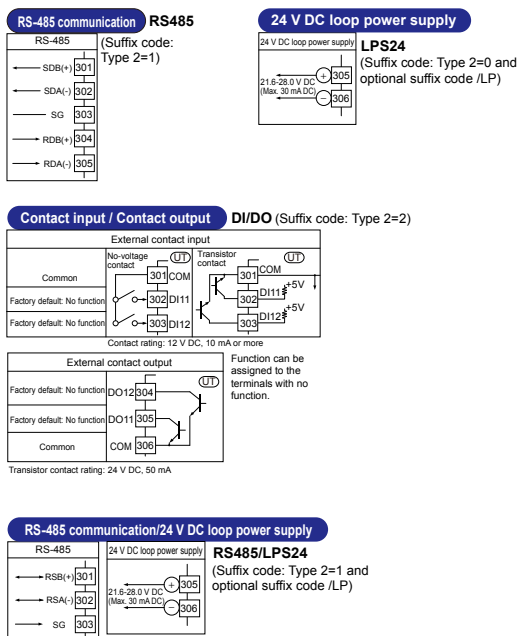

If the UT is located at the end of a segment for the DeviceNet communication wiring, terminating resistors are separately needed. These are to be prepared by users. (121 Ω: 1 pc.)
